
NeuroLM VQ: capacity and dead-code policy comparison
Valid-element reconstruction loss
8192 x 128, patience 100
1024 x 64, patience 50
Commitment loss
Adversarial loss
Per-batch active codes / capacity (%)
Per-batch perplexity / capacity
Largest code share per batch (%)
Epoch (897 updates)
4485 / 4485 compact-run updates. Faint: individual batches; solid: trailing 100-update mean.
Same training data, order, batch and schedule. Three settings change together; not a one-factor ablation.
